

Bullet Wound Packing Trainer Basic

CP.KC.0263

■ desc:

- The wound trainer kit with gauze is compact and handy.
- Easily carry and transport to practice anytime anywhere with no burden.
- Wounds simulate gunshot injury and stabbed situation.
- Sufficient wound depth allows students to practice gauze packing.

Bullet Wound Packing Trainer with blood

CP.KC.0385

■ desc:

- The wound trainer kit with gauze is compact and handy.
- Easily carry and transport to practice anytime anywhere with no burden.
- Introductory level trainer to practice basic stop the bleed skills in case of emergency.
- Students' can learn the correct techniques and procedures for many times and develop muscle memory.
- Gunshot wounds simulate bullet injury situation.
- Sufficient wound depth allows students to practice gauze packing.

GSW Wound Bleeding Tourniquet Trainer Kit

CP.KC.0260

■ desc:

- The GSW tourniquet and wound packing trainer kit is ideal for comprehensive tourniquets and haemostatic dressing training.
- The bleeding control system enables wound packing training realistic and affordable.

Thigh Laceration Wound Packing Trainer Kit

CP.KC.0249

■ desc:

- The Thigh Laceration Wound Packing Trainer Kit provides realistic thigh laceration wound simulation and a complete set for comprehensive training.
- Customization accepted.

Gunshot Wound Stop The Bleeding Training Kit

CP.KC.0248

■ desc:

- Get the Gunshot Wound Stop The Bleeding Training Kit to enhance the realism of wound packing when training.
- Support customization and wholesale.

Open Wound Bleeding Control Training Kit

CP.KC.0247

■ desc:

- The Open Wound Bleeding Control Training Kit provides a complete set for beginners to practice wound packing and bleeding control techniques.
- Customization and wholesale are available.

Laceration Wound Hemorrhage Control Trainer Kit

CP.KC.0246

■ desc:

- Customize your laceration wound packing trainer kit.
- Find the excellent way to demonstrate wound dressing and use it as a teaching model in emergency training.

Wound Packing Task Trainer Knife Laceration Wound

CP.KC.0140

■ desc:

- This comprehensive wound pack training kit includes 3 compressed gauze and 1 infusion bag, providing essential supplies for wound packing, wound dressing, and wound care.
- The advantages of the knife wound hemostasis training model are the opportunities for practice safety, reproducibility, feedback and evaluation, and cost and resource savings.
- It provides an efficient and low-risk training model for everyone to practice real life wound care.

Thigh Wound Pack Trainer Laceration Simulator Model of Leg

CP.KC.0217

■ desc:

- The model is a realistic laceration and stab wounds on the thigh with bleeding function.
- Ideal for practising wound dressing techniques in medical schools, first aid, emergency, tactical training institutions, military or community training.

Gunshot wound packing trainer, Bleed Control Training Kit

CP.KC.0216

■ desc:

- Improve wound care with the Silicone Wound Pack Trainer.
- This comprehensive kit includes 3 compressed gauze, 1 infusion bag, and 1 tourniquet to effectively manage wounds.
- Perfect for the training of wound packing and dressing, the trainer allows realistic moulage scenarios, especially for bullet wounds.

Gunshot Wound Packing Trainer

CP.KC.0215

■ desc:

- This comprehensive kit includes 3 compressed gauze and 1 infusion bag, providing essential supplies for wound packing, wound dressing, and wound care.
- The wound packing trainer can be attached to tiled walls, smooth glass and cabinets.
- You can practice different angles of wound dressing, just like dealing with wounds in different positions on the human body.
- The wounds on the base are a gift for those who like suturing.

Granulation tissue model set CP.KC.0397

■ desc:

- This set describes different features of granulation wound development : healthy granulation model, chronic granulation, hypergranulation tissue model

Wound Healing Simulation Granulation Tissue Replica Healthy CP.KC.0444

■ desc:

- The Healthy Granulation Tissue Model is a highly detailed, lifelike simulation designed for medical professionals, students, and researchers to study the healing process of soft tissues.
- Bright red or pink in color, moist and granular on the surface, indicating that the wound is healing smoothly.

Necrotic Tissue Model Slough Wound Dead Tissue Simulator CP.KC.0445

■ desc:

- The necrotic slough wound model is a realistic simulation of slough tissue which is characterized as being yellow, tan, green or brown in color and may be moist, loose and stringy in appearance.

Adhesive Burn Wound Moulages, 1st-4th Degree Skin Burn CP.KC.0463

■ desc:

.....

Chronic Granulation Tissue Model CP.KC.0443

■ desc:

- The Chronic Granulation Tissue Model is a meticulously crafted, realistic simulation designed to represent the complex characteristics of chronic granulation tissue in wound healing. It is an essential tool to study and understand the pathology of chronic wounds, a critical aspect of modern wound care.

Hypergranulation Tissue Model CP.KC.0442

■ desc:

- The Hypergranulation Tissue Model is a compact, highly realistic simulation designed to mimic the unique characteristics of hypergranulation tissue, which often occurs in wounds that fail to heal properly.
- This pocket-sized model offers an ultra-realistic texture and appearance, capturing the raised, excessive granulation tissue that can form in chronic wounds.

Wearable Abdominal Eviscerated Colon Wound Simulator Kit CP.KC.0273

■ desc:

- Realistic & wearable eviscerated intestine simulator with bowels and fat tissue.
- Perfect for showing abdominal evisceration treatment in emergency training.

Wearable Abdominal Evisceration with Intestine Simulator CP.KC.0274

■ desc:

- The Eviscerated Intestine Simulator authentically replicates the scenario where an exposed eviscerated intestine requires medical rescue.
- Great wound moulage for wound care and training.

Realistic Granulation Tissue Model CP.KC.0441

■ desc:

- The Mature Granulation Tissue Model is an anatomically accurate, highly detailed simulation designed to replicate the characteristics of mature granulation tissue in wound healing.
- This model features a lifelike texture, with realistic vascular structures and tissue appearance, making it ideal for medical professionals, students, and researchers seeking to understand the advanced stages of wound repair.

3 types of Necrotic Tissue Model CP.KC.0396

■ desc:

- This model kit includes 3 types of necrotic tissue simulators 2 types of eschar wounds and 1 type of slough wound.
- The wound simulator is mounted on a small card base that is compact and easy to carry.
- The realistic wound cards are perfect to teach nurses, medical students, first aid students and professionals the features and treatment of necrotic wounds.

Wearable Thigh laceration Wound Pack Trainer CP.KC.203

■ desc:

- This Thigh Laceration Training model is perfect for user to practice hemostasis skills.
- It replicates a deep tear in soft tissue, designed to teach students the correct technique for wound packing.
- It is useful tool in emergency rescue, First aid, EMT, TCCC course, and hospital training.

Wearable bleeding wound simulator kit CP.KC.0349

■ desc:

- This wound model is perfect for user to practice hemostasis skills.
- It's useful tool in emergency rescue, first aid and TCCC courses, and hospital training.
- The wearable design helps users train their stop bleeding skills in multiple locations.

Silicone Hand Gunshot Wound Simulator

CP.KC.0306

■ desc:

- The gunshot hand trainer features punctured gunshot wound on hand.
- It's useful for practising emergency wound care procedure on hand.
- Made of soft silicone and lifelike wound shape, it is useful tool for tactical medical training, first aid, emergency response, rescue training.

Silicone Hand Gunshot Wound Simulator with bleeding function

CP.KC.0307

■ desc:

- The gunshot hand trainer features punctured gunshot wound on hand.
- It's useful for practising emergency wound care procedure on hand.
- Made of soft silicone and lifelike wound shape, it is useful tool for tactical medical training, first aid, emergency response, rescue training.
- This model has bleeding simulation function so user can experience life like stop bleeding scenario.

Tourniquet and Wound Packing Arm Trainer

CP.KC.0275

■ desc:

- The hemorrhage control arm trainer simulates a full arm of an adult male, designed with 4 types of wound for tourniquet and wound packing emergency training.

Silicone Hand Amputated Wound Simulator Basic Amputation Finger

CP.KC.0308

■ desc:

- Made with high-quality silicone material, it perfectly replicates the effects of a real hand amputated wound, allowing you to deeply understand the characteristics of injuries without any risk.

Silicone Hand Amputated Wound Simulator

CP.KC.0309

■ desc:

- Made with high-quality silicone material, it perfectly replicates the effects of a real hand wound, allowing you to deeply understand the characteristics of gunshot injuries without any risk.
- This simulator is a crucial tool for medical training, military exercises, and law enforcement training, enhancing your emergency response capabilities to ensure quick and accurate action in critical situations.
- It features authentic textures that mimic the realism of a genuine wound, providing you with a highly immersive training experience.

Transparent trauma arm trainer

CP.KC.0310

■ desc:

- Practice bleeding control with this transparent arm simulator. It gives you visibility of how the blood flow during training.
- It features 2 laceration wounds with blood infusion function.

Gunshot Wound Palm

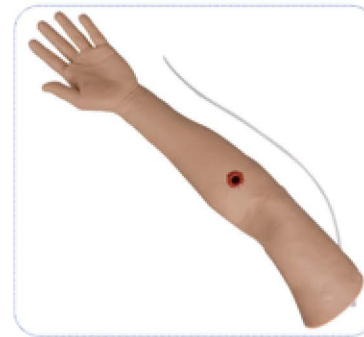

CP.KC.0305

■ desc:

- Made with high-quality silicone material, it perfectly replicates the effects of a real hand amputated wound, allowing you to deeply understand the characteristics of injuries without any risk.
- This simulator is a crucial tool for medical training, military exercises, and law enforcement training, enhancing your emergency response capabilities to ensure quick and accurate action in critical situations.

Silicone Gunshot Hand Simulator

CP.KC.0304

■ desc:

- Made with high-quality silicone material, it perfectly replicates the effects of a real gunshot simulator, allowing you to deeply understand the characteristics of injuries without any risk.

Amputated Limbs trauma model

CP.KC.0343

■ desc:

- Amputated Trauma Limbs model is useful training tool designed to teach students practice stop bleeding in emergency situation. It features life like trauma with bleeding function.
- It's designed to simulate the amputated upper thigh of adult man.
- Users can learn various wound packing and Haemorrhage Control technique such as tourniquet stop bleeding.
- Suitable for TCCC course and emergency casualty response training.
